☐ 1 On 1-factorizations of bipartite Kneser graphs

[Jin, K](#)

Oct 24 2020 | [THEORETICAL COMPUTER SCIENCE](#) 838 , pp.81-93

It is a challenging open problem to construct an explicit 1-factorization of the bipartite Kneser graph $H(v, t)$, which contains as vertices all t -element and $(v - t)$ -element subsets of $[v] := \{1, \dots, v\}$ (where $v > 2t$) and an edge between any two vertices when one is a subset of the other. In this paper, for the special case where $t = 2$ and v is an odd prime power, we construct such 1-factorizations.

☐ 2 Data-enhanced dynamic flight simulations for flight performance analysis

[Kim, D](#); [Seth, A](#) and [Liem, RP](#)

Feb 2022 | [AEROSPACE SCIENCE AND TECHNOLOGY](#) 121

Enriched Cited References

More often than not, airlines use aircraft in operating scenarios beyond their optimal design conditions, which negatively affects their performance characteristics. These effects are statistically reflected in flight operational data, which are indirectly constrained by air transportation management as well as aircraft design. In this research, we develop a data-enhanced methodology for modeling.

1 Data Kim, J. Feb 2022

2 Leveraging university research within the context of open innovation: The case of Huawei Yan, X and Huang, MY Mar 2022 | TELECOMMUNICATIONS POLICY 46 (2)

The emergence of 5G and the trade dispute between China and the United States have made Huawei a global hot topic. Owning 37% of the patents, Huawei is undoubtedly one of the key players in the development of 5G. For both governmental policy-makers and business decision-makers, an in-depth understanding of this rapidly growing manufacturer is therefore of significant implications to formulate 5
